

SMART  STYLER

**SmartStyler allows you to
*design & present products faster
and minimizes your time-to-market.***

A person is running through water, creating a large splash of white droplets. The person is in profile, facing right, and their body is wet. The background is a light blue, hazy water surface.

**How
do we
realize that?**

SmartStyler allows you to take control
of the dependencies in your chain

Minimizing Your Dependencies

in your core business processes can be a key strategy for ensuring long-term success and sustainability. Dependencies are any external factors that your business relies on to operate effectively, such as suppliers, vendors, or technology platforms. Dependencies can create significant risks if they become too critical to your operations.

An aerial view of three people participating in a team-building exercise. They are standing on a dark floor, holding onto blue vertical poles. The poles are connected to a central point above them by white cables and pink cylindrical weights. The brand name 'CROKER' is visible on the poles. The scene is dimly lit, with a blue and white color palette.

SmartStyler allows you to focus...

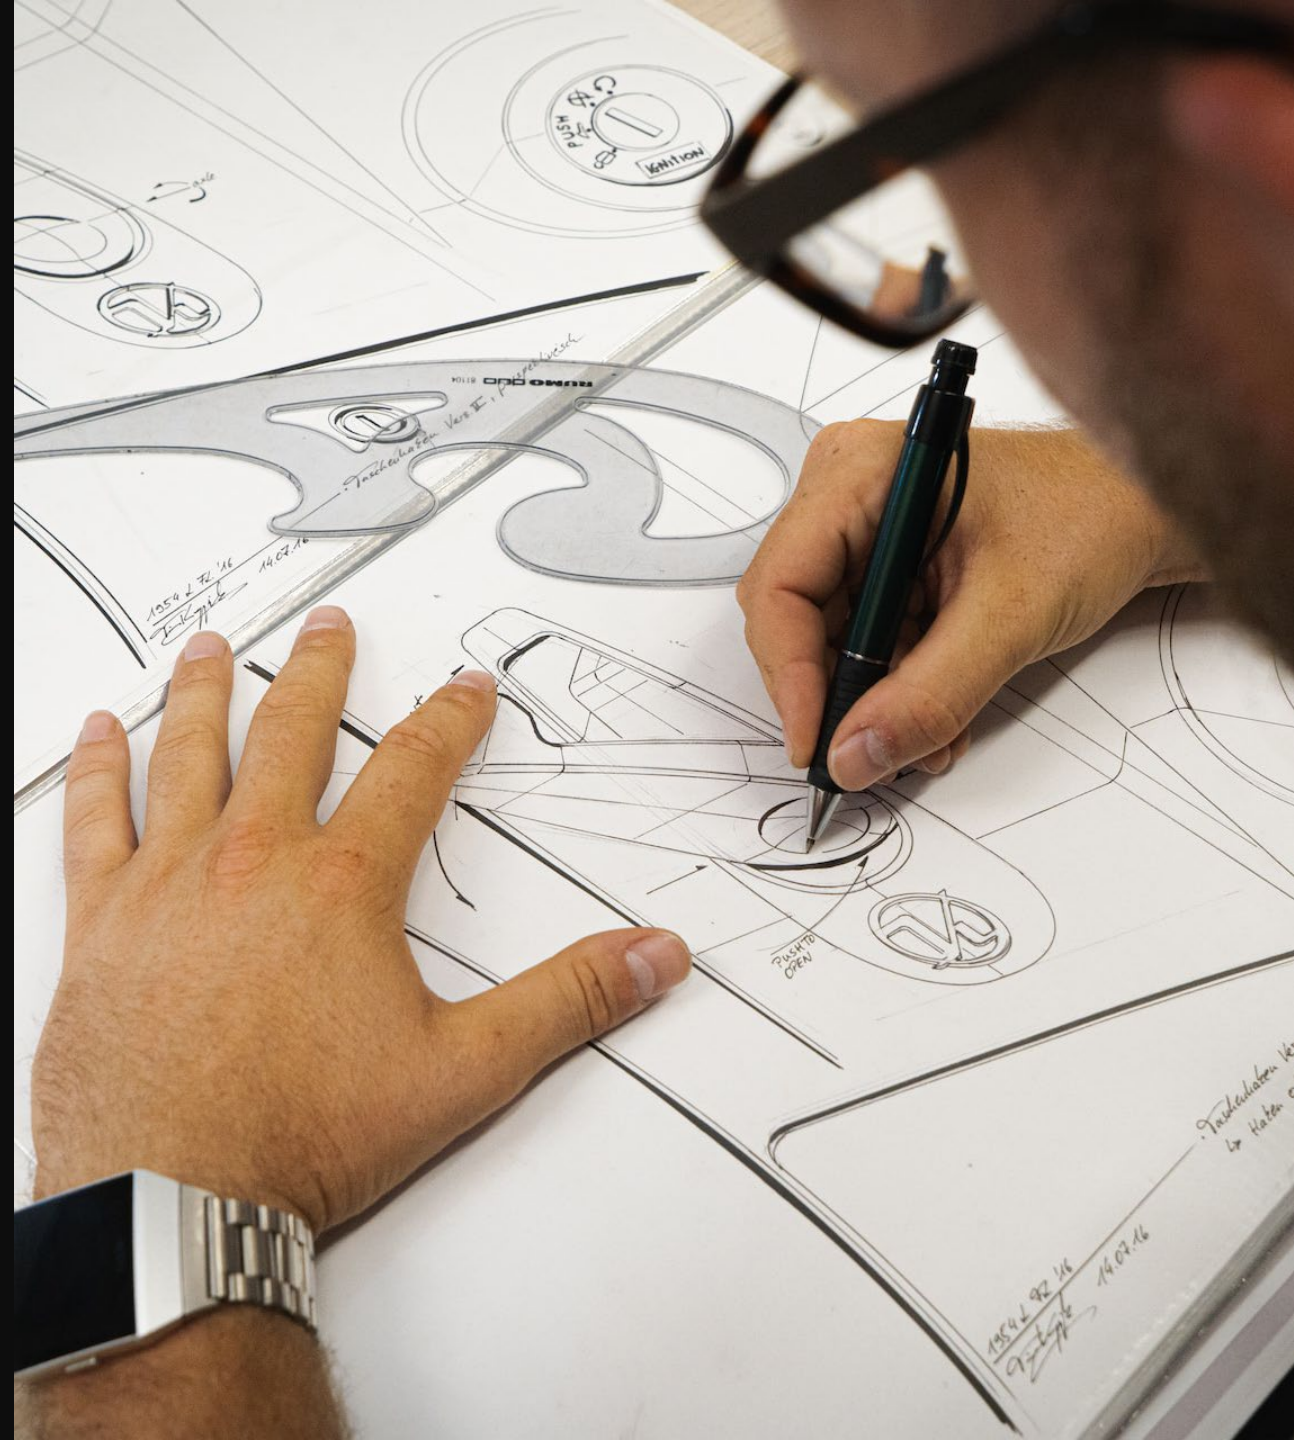

on building agile internal capabilities & expertise. By investing in your own employees and developing in-house solutions, you can reduce your reliance on external partners and gain greater control over your operations. This can also lead to greater innovation and differentiation.

Design with more flexibility!

One of the most impactful ways, 3D technology is set to change the “*Maker Industry*” is through virtual prototyping. With 3D design software, designers can create digital prototypes of products, allowing them to experiment with different designs, materials and colors without the need for physical samples.

This not only speeds up the design process but also reduces waste and saves on production costs.

SmartStyler allows you to do just that, simple and easily.

Speed up your sales process!

One of the key advantages of using 3D prototypes in the selling process is that it allows for customization and personalization. With 3D technology, it's possible to create unique, one-of-a-kind products that meet the specific needs and preferences of individual customers. This can be a powerful selling point and help to differentiate your products from competitors.

Additionally, 3D prototypes can be used to showcase a product's features and benefits in a more visually engaging way than traditional 2D images or product descriptions. By using 3D renderings and animations, potential customers can get a more realistic and interactive experience, which can help to build excitement and increase the likelihood of a sale.

Sustainability at its core!

In addition to improving the design and production process, 3D technology is also set to have a significant impact on the sustainability of the “Maker” industry. By reducing the need for physical prototypes and minimizing waste in the production process, 3D visualization technology can help to reduce the environmental impact of your design process.

This technology can also help to reduce the need for expensive prototypes, which contribute to the significant energy, value & resources waste problem within the industry.

User Centric Approach

SmartStyler offers you *a one-stop solution* when it comes to an integrated 3D process within your organization. From design to personalization, representation or customization, we've got your back!

Our platform is developed with the business user in mind. This means that we have little-to-no learning curve. An additional benefit is that we are capable of a very fast onboarding, allowing you to valorize the benefits immediately.

You know your business. We know ours. There is no reason for you to learn 3D!
